

Design Phase

1. Form Design

- The front-end design focuses on a clean layout within the Service Portal, ensuring that the form automatically grabs user context while keeping manual input to a minimum.

Form Layout

The screenshot shows a Service Portal interface for submitting a request for a new or replacement ID card. The breadcrumb trail is "Service Catalog > Can We Help You? > Employee ID Card Request". The form title is "Submit a request for a new or replacement ID card". The form fields are: "Department" (text input with a search icon), "Reason for Request" (dropdown menu with "New Hire" selected), and "Employee Name" (text input with a search icon and a red asterisk indicating a required field). On the right side, there is a "Shopping Cart" section showing "Order this Item" with a quantity of 1 and a delivery time of 0 Days. Below this are buttons for "Order Now" and "Add to Cart". The shopping cart itself is empty.

Technical Field Specifications

- Form Table:** sc_cat_item (Service Catalog Item)
- Variable Sets / Layout:** Single-column layout for easy mobile and portal view processing.

The screenshot shows the same Service Portal interface as the previous one, but with a completed example. The breadcrumb trail is "Service Catalog > Top Requests > Employee ID Card Request". The form title is "Submit a request for a new or replacement ID card". The form fields are: "Department" (text input with a search icon and a dropdown arrow, containing "Product Management"), "Reason for Request" (dropdown menu with "Lost Card" selected), and "Employee Name" (text input with a search icon and a dropdown arrow, containing "Alejandro Mascall" and a red asterisk indicating a required field). On the right side, there is a "Shopping Cart" section showing "Order this Item" with a quantity of 1 and a delivery time of 0 Days. Below this are buttons for "Order Now" and "Add to Cart". The shopping cart itself is empty.

2. Process Flow & Logic Design

The logic design outlines how data flows through the **Flow Designer** engine. It maps out the conditions under which a request moves forward or halts.

3. Communication & Email Template Design

This section outlines the exact template design used for the automated email action when a request is approved.

- **Trigger Condition:** Flow Designer Approval State = Approved
- **Recipient (To):** Requested For (The Employee)
- **Subject:** Your ID Card Request has been Approved

Email Body Template:

Subject: Your ID Card Request has been Approved

Hello [Trigger->Requested Item->Requested For->First Name],

Great news! Your request for a new or replacement Employee ID Card has been approved by your manager.

The screenshot shows an email configuration window. The title bar reads "Email Confirmation: Your ID Card Request has been submitted". The interface includes several input fields and buttons. On the left, there are fields for "Type" (set to "send-ready"), "Target" (set to "Requested Item: RITM0000005"), "User" (empty), "Notification type" (set to "SMTP"), and "Subject" (set to "Confirmation: Your ID Card Request has been submitted"). On the right, there are fields for "UID" (empty), "Created" (set to "2026-06-17 11:14:14"), "Deleted" (checkbox), "Weight" (set to "0"), and "Importance" (empty). At the top right, there are buttons for "Update", "Delete", and arrows for navigation.

4. Fulfillment Task Design

- **Task Type:** Catalog Task (SCTASK)
- **Parent Association:** Link directly to parent Requested Item (RITM).
- **Assignment Group:** Network (or Facilities Printing Pool).
- **Short Description:** Fulfill Employee ID Card Request.
- **Instructions for Fulfiller:**
 1. Verify employee status and profile photo in the system.
 2. Print the physical identity badge matching the requested reason.
 3. Update the tracking system and close this task as **Closed Complete** to notify the user.
