

# Development Phase

## Step 1: Catalog Item Form Creation

The user-facing form container was built to allow employees to submit requests directly from the Service Portal.

- Platform Navigation: Accessed via Maintain Items in the filter navigator.
- Form Settings:
  - Name: Employee ID Card Request
  - Catalog: Service Catalog
  - Category: Can We Help You?
  - Short Description: Submit a request for a new or replacement ID card.

The screenshot shows the 'Catalog Item' form for 'Employee ID Card Request'. The form is titled 'Employee ID Card Request' and is part of the 'Service Catalog'. It includes a 'Name' field with the value 'Employee ID Card Request', an 'Application' dropdown set to 'Employee ID Card Application', and a 'Catalog' dropdown set to 'Can We Help You?'. The 'Active' checkbox is checked. The 'Fulfillment automation level' is set to 'Unspecified'. The 'Owner' is 'System Administrator'. The 'Short description' field contains the text 'Request form for new or replacement employee ID cards'. The 'Description' field is empty. The 'Meta' field is empty. The form is displayed in a 'Form Builder' view with tabs for 'Item Details', 'Process Engine', 'Picture', 'Pricing', and 'Portal Settings'. A 'Copy' button is visible at the bottom left.

## Step 2: Form Variables (Fields) Configuration

Three fields were created under the Variables related list to collect structured information without relying on messy free-form text boxes.

| Field Name    | Type       | Label              | Details / Specifications                                                                                                                                    |
|---------------|------------|--------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------|
| employee_name | Reference  | Employee Name      | Links directly to the User [sys_user] table. Marked Mandatory.                                                                                              |
| department    | Reference  | Department         | Links directly to the Department [cmn_department] table.                                                                                                    |
| reason        | Select Box | Reason for Request | Dropdown menu containing three custom Question Choices: <ul style="list-style-type: none"> <li>New Hire</li> <li>Lost Card</li> <li>Damaged Card</li> </ul> |

### Step 3: Flow Designer Automation Logic

A background automation routine named Employee ID Card Request Flow was built in Flow Designer to handle routing, approvals, and fulfillment.

- **Workflow Trigger:**

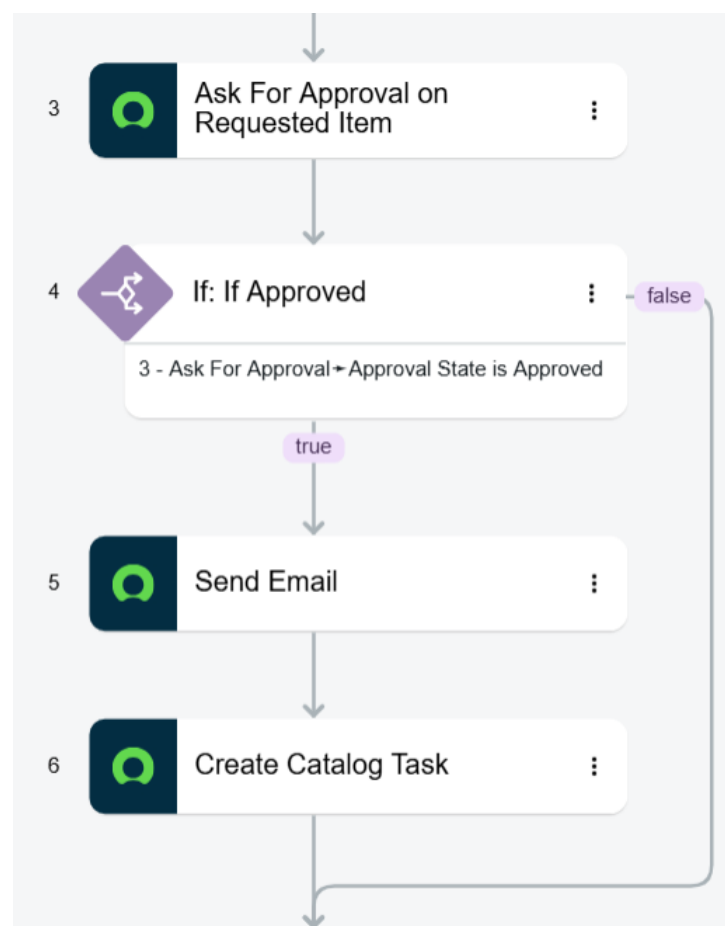

Set to execute whenever the Service Catalog item is ordered.

- **Action 1 (Manager Approval Gate):**

Added an *Ask For Approval* block. The system uses data pills to dynamically look up the supervisor (Trigger -> Requested Item Record -> Requested For -> Manager).

- **Action 2 (Conditional If-Branch):**

An If Approved condition check inspects the results of the approval block.

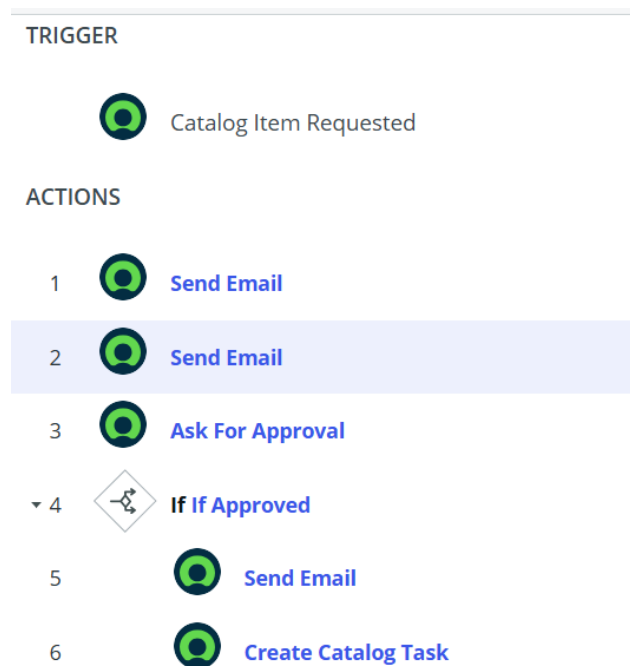

- **Action 3 (Automated Notification):**

Inside the approved branch, a *Send Email* step automatically emails a confirmation message back to the Requested For user.

- **Action 4 (Fulfillment Task Generation):**

Inside the approved branch, a *Create Catalog Task* step spawns a physical execution ticket (SCTASK) assigned to the Network/Facilities group to print the badge.

## Step 4: System Integration Linkage

To ensure the form knows which automation routine to run, the front-end and back-end configurations were joined together.

- **Linkage Location:**

Opened the Employee ID Card Request catalog item form and navigated to the Process Engine tab.

- **Execution Mapping:**

Selected the newly created Employee ID Card Request Flow in the Flow field and updated the record.
