

Ideation Phase

Project Overview:

The Challenge

- **Manual Inefficiencies:**

Tracking corporate ID card requests manually causes fulfillment delays and communication gaps between employees, managers, and facilities.

- **Lack of Visibility:**

Employees have no real-time tracking for their security badges.

- **No Asset Analytics:**

Management cannot view trends or data on *why* badges are issued (e.g., distinguishing between lost items, replacements, or new hires).

Proposed Solution

The "Employee ID Card Request Hub" App

- **Unified Scoped App:**

A dedicated, secure sandbox application built in ServiceNow Studio to package all configurations cleanly.

- **Version Control:**

Linked directly via native Git integration to **GitHub** for enterprise-grade deployment and backup.

- **Role-Based Value:**

- **Employees:** A simple, dedicated catalog request form.
- **Managers:** Automated email alerts and a simplified approval gate.
- **Fulfillers:** Automatic generation of task tickets for physical card creation

Core Application Architecture

The Automation Workflow Lifecycle

1. Trigger:

A user submits an ID card request with a specific reason (*Lost, Replacement, or Newbie*).

2. Notification:

Instant confirmation emails fire automatically to the requester and the management team.

3. Approval Gate:

The flow halts until an authorized manager marks the record as **Approved**.

4. Task:

Once approved, the flow automatically spawns an **SCTASK** assigned to the printing team, pausing until they close it.

Core Automation ID Card Process

Business Intelligence & Success Metrics

Data-Driven Insights

- **The Analytics Dashboard:**

Real-time visual pie/donut charts dot-walking to catalog variables.

- **Key Visual Breakdown:**

Metrics track total counts exclusively partitioned by the request context (**Lost vs. Replacement vs. Newbie**).

- **Success Criteria:**

- Reduction in badge turnaround time.
- 100% accurate data logging for security audit trails.
- Clean, automated codebase fully pushed to GitHub repositories.
