

Planning Phase

Project Schedule & Milestones

- **Milestone 1: Data Model & Frontend Blueprinting**
 - Initialize the **Employee ID Card Request** template container within the Maintain Items registry.
 - Construct the application's schema variables (employee_name, department, reason).
 - Map the relational reference lookups strictly to the core database tables (sys_user and cmn_department).
 - Configure structural dropdown question choices (New Hire, Lost Card, Damaged Card).

Catalog Items are goods or services available to order from the service catalog. Items can be anything from hardware, like tablets and phones, to software applications, to furniture and office supplies.

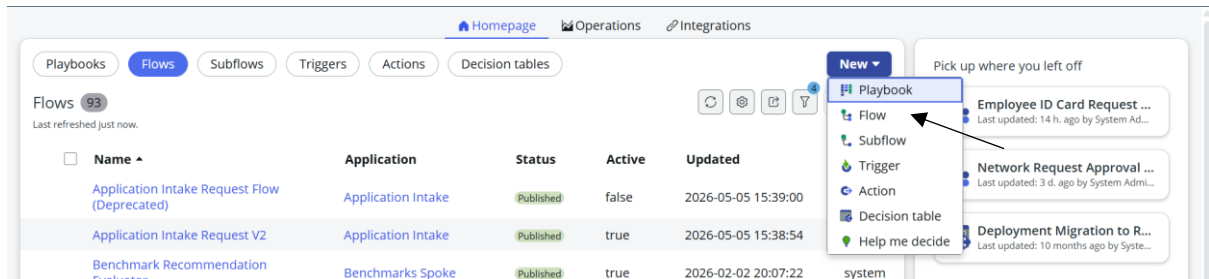

- Enter a Name and Short description to display for the item.
- Enter a Price, approvals, variables, and other information as needed.

- **Milestone 2: Automation & Routing Engine Logic**

- Provision the Employee ID Card Request Flow within Workflow Studio/Flow Designer.

- Bind the baseline workflow orchestration execution trigger explicitly to the Service Catalog engine.
- Configure the multi-tiered downstream flow logic:

1. **The Approval Gate:**

Dynamic manager calculation via Requested Item Record > Requested For > Manager.

2. **The Conditional Branch:**

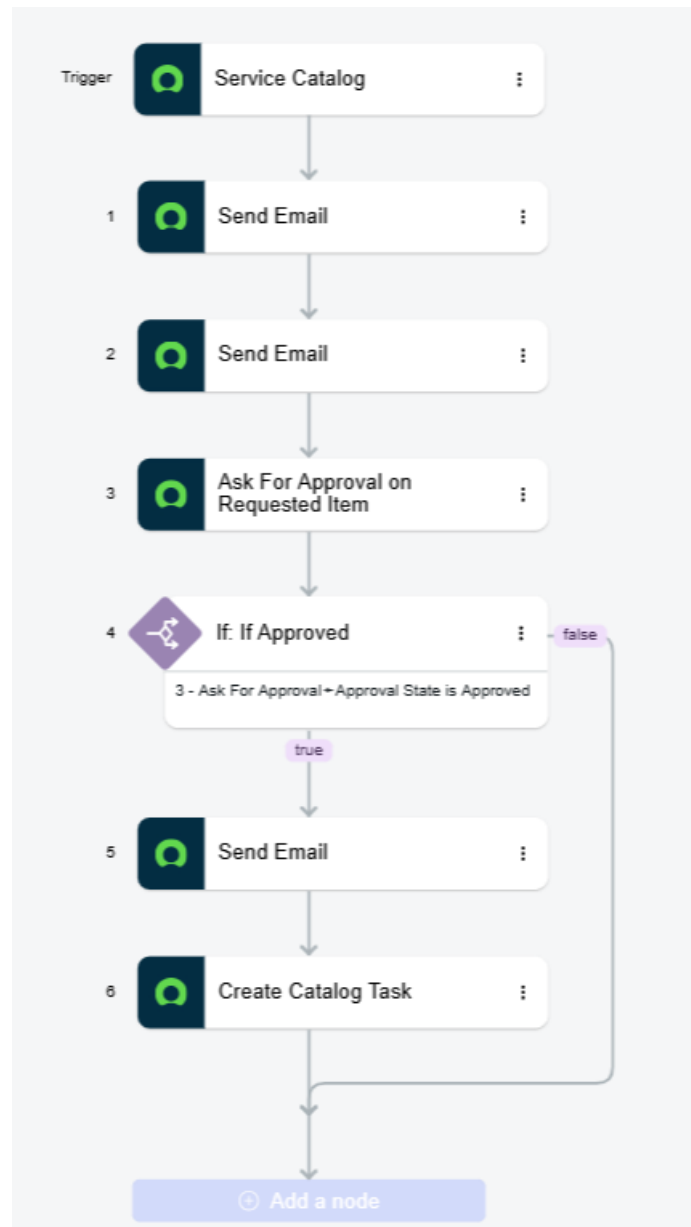

An If conditional block parsing the approval state string.

3. **The Communication Step:**

Automated generation of the confirmation email block.

4. **The Task Step:**

Spawning the execution script for Create Catalog Task (SCTASK).

- **Milestone 3: Inter-Module Mapping & Compilation**

- Link the background automation flow directly to the published Service Catalog item form using the Process Engine properties tab.
- Perform compile-time validation to ensure cross-scope visibility parameters are successfully met.

- **Milestone 4: End-to-End Quality Assurance**
 - Execute mock record creation sequences utilizing the platform's sandbox native Try It simulation feature.
 - Perform comprehensive lifecycle auditing on the generated RITM state trees to verify that the flow accurately pauses at the manager gate.

2. Resource Allocation & Responsibility Matrix (RACI)

This matrix maps out key responsibilities for the project to ensure a seamless execution across all phases.

- **Responsible:** The individual executing the specific configuration steps.
- **Accountable:** The individual with final ownership over the feature's architectural accuracy.
- **Consulted:** Domain experts or stakeholders providing required data points (e.g., table structure parameters).
- **Informed:** Stakeholders who are kept updated on completion status.
